VIBRATION DONGLE

A **wearable vibration dongle** capable of providing alarms when a drone or controller is detected by Wingman.

The **Vibration dongle** is lightweight and small, making it suitable for arm, wrist or many other mounting options.

The Vibration dongle is designed for any situations where the wingman's internal vibration can't be felt, and when the audio feedback is not an option. This might be if wearing heavy equipment, in a noisy environment, or similar situations.

PARAMETER	SPECIFICATION
Weight	85 g
Dimensions (DxWxH)	22 x 40 x 28 mm

The vibration dongle delivers notifications when a drone or controller is detected, making the user aware of a given possible threat. The vibration dongle is easy to set up, simply plug it in your wingman, and you are good to go. The Vibration dongle is easily mounted with the provided elastic band, that can be adjusted in size.

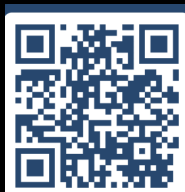

NON-ITAR

The Vibration dongle is NON-ITAR
